

An emerging technology predicted to change the world of healthcare!

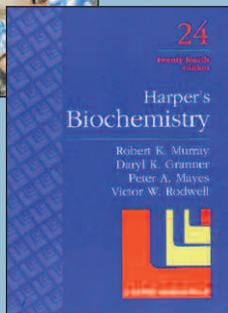

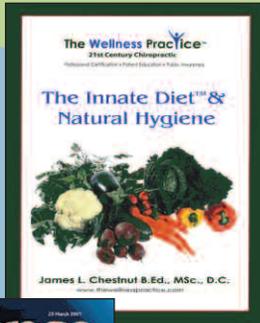

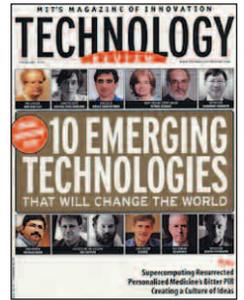

The body can overcome virtually any sickness or disease.

The secret to self healing is knowing the difference between what is merely helpful and what is truly vital.

Glycomics (the study of sugars) is 1 of 10 emerging technologies that will change the world.

“Knowledge of sugars’ functions could affect medicine far beyond improving drug doses and fighting cancer. Researchers are looking into how sugars influence the development of Parkinson’s, Alzheimer’s, and infectious diseases like AIDS and herpes to name a few. If you don’t have glycosylation, you don’t have life. The medical potential...is absolutely enormous.”

MIT’s *Technology Review*, February 2003

“We are so excited about being on the cusp of this incredible discovery for human health. Glyconutrients are the foundation of proper cellular communication and, thus, the entire human body’s system for self healing. This science and process totally supports and is consistent with our strategy of healing in the chiropractic field wherein we align the central nervous system so proper cellular communication can flow through the human body.”

Dr. CJ Mertz, Former President, International Chiropractic Association

“The function of our cells determines our states of health and sickness. There is no disputing our diets are deficient in monosaccharides; therefore, supplementation is prudent for anyone who is not eating an innate diet.”

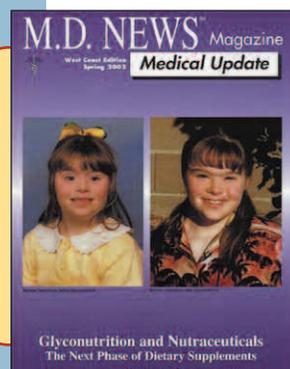

Glycobiology and glyconutrient supplementation are being taught in the International Chiropractic Association’s new 100 hour Wellness Certification course by Dr. James Chestnut, B.Ed., MSc., DC.

Science Magazine, March 2001, the premier journal for researchers and scientists, dedicated an entire issue to educating the science and medical community about Glyconutrients, Glycobiology and Glycoscience. The lead article was titled “Saving Lives With Sugar.”

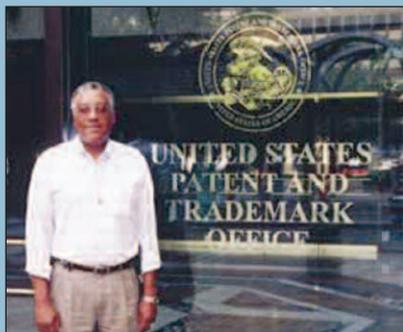

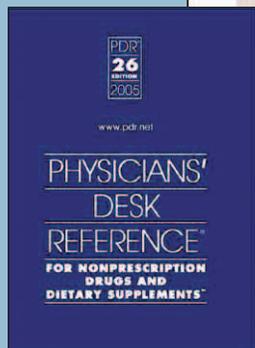

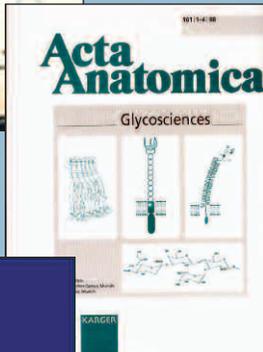

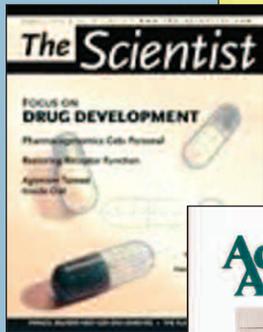

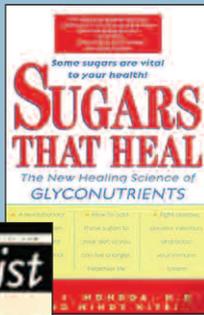

Harper's Biochemistry is a medical text-book that has been educating healthcare students

and professionals about Glyconutrients and their role in health and healing since 1996. The author, Dr. Robert Murray, now educates medical professionals around the world on the benefits of Glyconutrients.

“Glyconutrition and nutraceuticals are the next phase of dietary supplements. They aid in cell-to-cell communication and promote the body to heal itself. These are not alternatives, but complementary practices.”

M.D. News, Spring 2002

“Even tiny amounts of these sugars—or lack of them—have profound effects. In test after test conducted at leading institutes around the world, these saccharides have been shown to lower cholesterol, increase lean muscle mass, decrease body fat, accelerate wound healing, ease allergy symptoms, and allay autoimmune diseases such as arthritis, psoriasis, and diabetes. Bacterial infections, including the recurrent ear infections that plague toddlers, often respond remarkably to saccharides, as do many viruses—from the common cold to the flu, from herpes to HIV. The debilitating symptoms of chronic fatigue syndrome, fibromyalgia, and Gulf War syndrome frequently abate after adding saccharides. And, for cancer patients, saccharides mitigate the toxic effects of radiation and chemotherapy—while augmenting their cancer-killing effects, resulting in prolonged survival and improved quality of life.”

Emil Mondo, MD, *Sugars That Heal*

“Sugars, or more properly, the complex sugars called glycans, are now recognized as critical mediators of cell-cell communication, playing roles in cancer, infection, immunity, and even the interactions between egg and sperm.”

The Scientist, August 2004

“The last decade has witnessed the rapid emergence of the concept of the sugar code of biological information: Indeed, monosaccharides represent an alphabet of biological information...but, with unsurpassed coding capacity.”

Acta Anatomica, the International Journal of Anatomy, Embryology and Cell Biology

The *Physician's Desk Reference (PDR)* is used by 99% of all doctors and health-care professionals before recommending solutions to their patients. Glyconutrients are listed for compromised immune systems.

John Rollins, former award-winning US Patent and Trademark Office official and cellular biologist, said, *“There have been many significant discoveries, but one stands head and shoulders above the rest; the discovery of a new category of vital nutrients called glyconutrients. This discovery might provide **the single biggest opportunity to impact health** from both ends of the spectrum. First, glyconutrients are essential for normal defense functions, making them one of the best strategies for reducing the risk of disease. Second, they are also necessary to support the normal functions of repair, making them one of the most critical strategies for supporting the body's normal healing functions.”*
