PAGES 6-15!

It's in the news every day.

Chronic illness and disease are skyrocketing. It's no wonder when an estimated seven billion pounds of toxins and chemical agents are added to the water we drink, the food we eat and the air we breathe each year. The modern diet is full of junk food, processed foods and high levels of preservatives and additives. For many, stress is at an all time high and our bodies are beginning to break down!

Here are the alarming facts.

- 1 out of 2 people will die of a heart attack
- 1 out of 3 people will get cancer
- 1 out of 2 people will get an autoimmune disease
- 3 out of 4 people will get a degenerative disease

The typical medical response for chronic illness and disease is to use pharmaceuticals for treatment.

It is clear that the “feeling ill, take a pill” approach is not working! Families around the world are getting fed up. People are sick and tired of being sick and tired.

Families are beginning to ask questions like, “Why are our family members getting sick in the first place? How can we protect our family from disease? If a family member is diagnosed with a disease, how can the cause of the problem be addressed and not the symptoms? Since drugs have lots of side effects, what are the safe alternatives to the traditional pharmaceutical approach to restore health in the body?”

Does the traditional allopathic healthcare system have the answer for chronic illness and disease? Not likely. In fact, the healthcare system harms and kills millions of people a year.

Alarming statistics

- More than 196,000 people die and 2.2 million are injured each year by adverse reactions to prescription drugs. The use of prescription drugs is the 3rd leading cause of death in the USA.
- The annual death toll from hospitalization and outpatient care exceeds 424,000 per year.
- Retail prescription drug sales are rising at well over 18% from previous years.
- The highest increase of drug consumption is in the age group of children two to five years old.

We have become an over-medicated society. This is bad news for us, but great news for the pharmaceutical companies. It seems most pharmaceutical companies are aggressively looking to increase profits by creating new long term treatments—not looking for cures.

Harvard Medical Doctor Speaks Out

Marcia Angell, MD, former editor of the *New England Journal of Medicine* and

now a senior lecturer at Harvard Medical School summarized her thoughts of pharmaceutical companies in a recent interview with the *Los Angeles Times*. She was asked, "We all know drugs are expensive. But doesn't that reflect the high cost of researching and developing new drugs?" Dr. Angell responded, "No. That's what the drug makers would like you to think. But it's simply not true. In 2002, the biggest drug companies spent only about 14% of sales on research and development and 31% on

Here's your wake-up call.

what most of them call marketing and administration. They consistently make more in profits than they spend in Research and Development. And their profits are immense. In 2002, the combined profits of the 10 drug companies in the Fortune 500 were \$35.9 billion. That's more than the profits for all the other 490 businesses put together."

Does that seem right to you? Here's your wake-up call.

You can no longer put the responsibility of your health in the hands of your doctors (and their pharmaceutical partners), insurance companies or the government. You must be proactive and take responsibility for your own health and the health of your family. You must not be complacent.

Feeling good can be an illusion.

"It was a shock," said Dr. Ben Carson, a professor of neurosurgery, oncology, plastic surgery and pediatrics at John Hopkins

University. "I had been living a healthy lifestyle and getting regular check-ups. But I had high grade cancer in a very aggressive form."

Dallas Weekly

Don't be mistaken that good health is present when there is an absence of pain or symptoms. Symptoms are the last and final stage of a breakdown that has been in process for years or even decades. Just because you don't feel bad, doesn't mean that you are disease-free. Cancer, for example, takes between five to thirty years to develop. You won't even be aware that it is spreading. By the time it is diagnosed, it will have already run 90-95% of its course and you are left fighting for your life.

Enhance your immune system with Glyconutrients.

An enormously important technological breakthrough has resulted from our rapidly improving understanding of cellular biology. Researchers have figured out that when two cells touch they communicate their needs through glyconutrients. Just like the English language is made up of 26 letters, the language of the cells is made up of 8 glyconutrients.

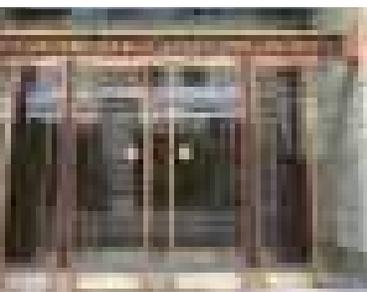

Unfortunately, we have a problem. We only get 2 glyconutrients from the modern day diet. To make matters worse, our body is in a constant battle fighting toxins, stress, and poor nutrition which all have a negative impact our immune system. In fact, the average person's immune system gets weaker every year.

Here's the good news. Scientists describe glyconutrients as the "missing link" in nutrition. They play a vital role in disease prevention and immune system restoration.

Glyconutrients are critical in helping your immune system to stay strong and in balance. By supplementing your diet with glyconutrients, you'll reduce your chances of being part of the population who will die of heart disease, diabetes and cancer.

Who Studies and Recommends Glyconutrients?

Noted researcher, John Axford, BSc, MD, FRCP, President of the Section of Clinical Immunology and Allergy of the Royal Society of Medicine, spent an extensive amount of time researching the science behind glyconu-

trients. His conclusion is that they are the molecules of the next decade and this discovery is at the forefront of a new frontier of true healthcare. Dr. Axford was so impressed with the discovery of glyconutrients that he now serves on the board of directors for the world's premier glyconutritional company.

The prestigious 7th Jenner Glycobiology & Medicine Symposium was held recently at The Royal Society of Medicine conducted by the University of Oxford, in England. This symposium included scientists and physicians exploring the cutting edge discoveries in the rapidly emerging field of glycobiology. Researchers from France, Denmark, The Netherlands, Norway, Belgium, United States and United Kingdom presented papers on the benefits of sugar molecules with topics

ranging from hepatitis C, borine viral diarrhea and HIV to muscular dystrophy, ovarian cancer and rheumatoid arthritis.

Dr. John Rollins,

a former award-winning US Patent and Trademark Office official, said in a recent inter-

view with *The Atlanta Voice*, "There have been many significant discoveries, but one stands head and shoulders above the rest; the discovery of a new category of vital nutrients called glyconutrients. This discovery might provide the single biggest opportunity to impact health from both ends of the spectrum.

- First, glyconutrients are essential for normal defense functions, making them one of the best strategies for reducing the risk of disease.
- Second, they are also necessary to support the normal functions of repair, making them one of the most critical strategies for supporting the body's normal healing functions."

The Massachusetts Institute of Technology (MIT) in its February 2003 issue of *Technology Review* named Glycomics (the study of sugars) as one of ten emerging technologies that will change the world. They said, "If you don't have glycosylation, you don't have life. The medical potential...is absolutely enor-

mous." Recently, at the 2nd Annual Emerging Technologies Conference at MIT, glyconutrient supplements were selected to be one of the premier exhibits. The purpose was to educate the international audience of scientists, entrepreneurs, inventors, and investors on the impact of this breakthrough discovery.

The National Institutes of Health recently awarded a five-year, \$34 million grant to the top research centers in the United States and in Europe to understand how cells and the immune system use these "sugars" and their implications in disease.

M.D. News, Spring 2002, states, "Glyconutrition and nutraceuticals are the next phase of dietary supplements. They aid in cell-to-cell communication and promote the body to heal itself. These are not alternatives, but complementary practices."

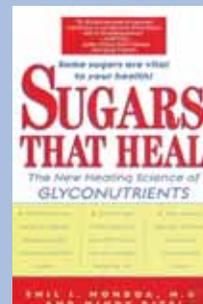

The *Physicians' Desk Reference* (PDR) is consulted by 99% of all doctors and healthcare professionals before recommending solutions to their patients. Glyconutrients are listed in the PDR for compromised immune systems.

Harper's Biochemistry, a medical textbook used to educate healthcare professionals, has included glyconutrients and their role in health and healing since 1996.

Too good to be true?

Here's what the editors of Random House say about glyconutrients in their review of the book, *Sugars That Heal*, by Emil Mondo, MD. "Even tiny amounts of these sugars—or lack of them—have profound effects. In test after test conducted at leading institutes around the world, these saccharides have been shown to lower cholesterol, increase lean muscle mass, decrease body fat, accelerate wound healing, ease allergy symptoms, and allay autoimmune diseases such as arthritis, psoriasis, and diabetes. Bacterial infections, including the recurrent ear infections that plague toddlers, often respond remarkably to saccharides, as do many viruses—from the common cold to the flu, from herpes to HIV. The debilitating symptoms of chronic fatigue syndrome, fibromyalgia, and Gulf War syndrome frequently abate after adding saccharides. And, for cancer patients, saccharides mitigate the toxic effects of radiation and chemotherapy—while augmenting their cancer-killing effects, resulting in prolonged survival and improved quality of life."

New research indicates that glyconutrients enhance stem cell production!

H. Reg McDaniel, MD, recently published a study in the *Proceedings of the Fisher Institute for Medical Research* titled, "A puzzle becomes a solution: Growing evidence indicates that the glyconutrient supplementation supports endogenous adult stem cell production, migration, differentiation, and restoration of cellular damage."

Why do stem cells have such great therapeutic potential? From a simplistic stand point, stem cells are your repair system. When you get a cut on the body, skin stem cells create new skin cells to fill the gap and heal the wound. Stem cells are constantly at work maintaining our bodies and they are the only cells that can produce exact replicas of themselves. Adult stem cells are also proven to help with cancers such as-lymphomas, leukemias, multiple myeloma, breast cancer, neuroblastoma, renal cell carcinoma and ovarian cancer; as well as autoimmune diseases such as-multiple sclerosis, systemic lupus, rheumatoid arthritis, scleroderma, scleromyxedema, diabetes and crohn's disease.

Dr. McDaniel suggests that stem cell production is super charged when glyconutrients are introduced into the body. In fact, tests show that within

An adult stem cell can replace blood cells killed by cancer or by such cancer treatments as radiation and chemotherapy.

a week of consuming glyconutrients, many new stem cells can be found. This may be why glyconutrients are vitally important for restoring the body back to a healthy state.

The implications are enormous.

Dr. Ben Carson said that glyconutrients should become a complementary component of our healthcare system. "The science made sense to me. God gave us (in plants) what we need to remain healthy," he said. "In today's world our food chain is depleted of nutrients and our environment has helped destroy what God gave us."

—Dallas Weekly

Acta Anatomica, the prestigious International Journal of Anatomy, Embryology and Cell Biology said, "The last decade has witnessed the rapid

emergence of the concept of the sugar code of biological information: Indeed, monosaccharides represent an alphabet of biological information...but, with unsurpassed coding capacity."

Glyconutrient education is going mainstream

The University Of Miami School of Medicine recently certified a course for the general public to learn about the new science of glyconutrition and its role in human health. The purpose of this program is to educate families like yours with what you need to

know about nutrition to have optimal health.

Glyconutrients have broken another barrier of traditional medicine. Recently, at the 8th Annual World Congress on Medicine and the Internet sponsored by United Nations in Geneva, Switzerland, glyconutrients were the hot topic. It is literally unheard of for a nutritional breakthrough to be discussed at this prestigious medical conference. Make no mistake, glyconutrients are becoming very well known on a global basis.

What does all this mean for you and your family?

If you give your body what your body needs, it will heal, correct and repair itself. The first step in prevention and cell restoration is to put glyconutrients back into your body.

The results in anecdotal testimonies and in clinical studies have been nothing short of spectacular, or even miraculous!

Here are some health challenges of the families listed:

Chemical Burns

TESTIMONIALS

from families who are

The Smart family received benefits in the areas of: Irritable Bowel Syndrome, colitis, hypertension, high cholesterol, and post traumatic syndrome, chronic fatigue syndrome and severe allergies.

My name is Jeff Smart and I am a registered nurse and a neuromuscular therapist. I was the skeptic's skeptic when I was introduced to glyconutrients. Now you have to understand where I was coming from. Being trained in the traditional model of healthcare, I had the belief that if medicine couldn't fix it, it could not be fixed. For over a year this minister would show up at my office with piles of literature for me to read. Not wanting to hurt his feelings, I would take the pile and place it in my desk drawer for safe keeping. After his twelfth meeting with me, I opened the drawer which was full of material he had given me over the past year. I handed him the materials and said thanks, but I'm not interested.

My sister found out about glyconutrients and sent me a box. Then came the phone call from my sister. She wanted to know if I had received the box. I said the box is here and I know all about it, and I'm not interested. She went on to say, there's about \$300 worth of product in the box, take it and let me know what you think—it's free.

Well, not wanting to turn down something for free, I decided to give it a try. At the time, I thought I was a very healthy person. I suffered from irritable bowel, colitis, hypertension, high cholesterol and post traumatic syndrome. These were some of the same conditions, that as a Registered Nurse, I would see everyday in my patients. I was taught there was a drug that would somewhat control all of these symptoms. The fact was, I was spending seven hundred dollars each month just to control my numerous symptoms and I thought I was still this very healthy person. I didn't realize there was a better way.

I began taking the products in the box. One of the first things I began to notice was that my stools were starting to take form and I had much more energy. My wife, Sherry, began to notice my increase in energy also. At the time, she suffered a mild form of chronic fatigue syndrome. So we got her started on the products and within days she became more energized. These results got our attention. We started both of our children on the products. Our daughter, Kirby, suffered from allergies to the point to where she would receive two shots per week to boost her immune system. After about a month or so on the products she no longer needed the shots and today, five years later, she is still allergy free. Over the next few months my symptoms began to disappear and I was able to quit taking all of my prescription drugs and have not taken any drugs for the last five years. I have since had check-ups and all my blood levels are normal. My wife no longer suffers from chronic sinus infections throughout the year. These products have radically changed our lives.

proactive in restoring their health

The Petrovick family received benefits in the areas of: fibroid cysts, PMS, severe allergies, dyslexia, ADHD, surgery recovery, energy, and academics.

My name is Terry Petrovick, and I was introduced to glyconutrients over seven years ago, by accident, while on a business trip. My wife, Amy, was very skeptical. I looked at the science, the patents and listened to what seemed unbelievable testimonials. Amy reluctantly agreed to try the products. She said that if it helped her shoulder, (a 20-year-old shoulder injury from high school) that she would support the family using the products. Much to her surprise the fibroid cysts in her breasts that she had suffered with for fifteen years were 95% gone within two weeks and her PMS and mood swings were gone. Her shoulder pain was gone within a month and a half.

***Our family is completely drug free!
We are thrilled that we were introduced to glyconutrients!***

Our daughter, Christina, was fourteen when we got on the products. At the time, she was suffering with extreme cramps from her menstrual cycle. Each month she would stay out of school for a couple of days, doubled over in her bed from the pain. She was on two pharmaceutical drugs but got no relief. After starting on the products she no longer had to suffer through that monthly pain. She was thrilled.

Our son, Matt, was twelve when we got started. He suffered from severe allergies. With two cats and two dogs in the house, his doctor recommended that he get on medication, and get rid of the pets. Plus he encouraged us to pull up all the carpet in our house and keep a very clean house. Within a few weeks after starting these products, his allergies were gone. And we still had the animals, the carpet and the house wasn't any cleaner.

In addition, Christina had suffered from dyslexia and reading comprehension. We sent her to a private school where the teacher to student ratio was 4:1. We tried vision therapy with little success in improving her grades. Mathew was diagnosed with ADHD in first grade and eventually was put on Ritalin. Although the school encouraged it, Mathew didn't like it. So we took him off after a month. Another unexpected benefit is that both kids went from struggling B/C students to A/B Honor Role students. Today Mathew is studying to be a Veterinarian in college where he maintains a 3.8 GPA. He doesn't miss a day of taking the products. Christina's reading and comprehension problems are gone. She started her own business and has been published in industry journals and produces marketing literature for her company.

We shared the products with my mom and dad who are now 76 and 78 years old respectively. They have fantastic health. My dad had a knee replacement a couple of years ago and the doctors and physical therapists were shocked at how well he did in surgery and how quickly he recovered. They have no health problems to speak of. As for me, the benefits have been more energy, better clarity of thought and a greater sense of well being. For Amy and me it is all about prevention. Our family is completely drug free! We are thrilled that we were introduced to glyconutrients!

The Sullivan family received benefits in the areas of: back pain, endometriosis, menstrual cycle, cancer cells, fibromyalgia, leukemia, allergies.

My name is Michelle Sullivan. I had many health issues when I was first introduced to the glyconutrient products back in 1998.

I had broken my back in a car accident in 1990 and was in a body cast for six months. That accident and subsequent

surgeries left my immune system weak. I was later diagnosed with endometriosis and cancerous cells on my cervix. I stopped having my menstrual cycle for seven months. I also had a pain in my joints and a rash all over my body! The doctors managed my pain with drugs, but I wasn't getting better. I was falling apart, and I was only 28 years old!

Once I started on the products—my menstrual cycle started back in three days and has been normal ever since. My endometriosis disappeared as did the cancerous cells. My joint pain finally disappeared, as did my rash. And—best of all—my back pain disappeared and I haven't needed any medications for more than six years now. I had such wonderful results that my entire family tried the products. My sister had fibromyalgia. Her doctor said

The Kruppenbach family received benefits in the areas of: obesity, chronic allergies, fibromyalgia, arthritis and menopause symptoms (including sleeplessness, mood swings and hot flashes), ADD, chronic allergies and sports-induced asthma, mental clarity, wrinkles, blood pressure, heel spurs, tiredness, and headaches.

My name is Karen Kruppenbach. I suffered from obesity, chronic allergies, fibromyalgia, arthritis and symptoms from menopause (including sleeplessness, mood swings and hot flashes). Having two minors in nutrition and knowing that the body can heal itself, I used food supplements for years—with no relief. In October of 2003, I was introduced to glyconutritionals. I had an amazing product experience within days. Within one month of taking glyconutritionals, I was symptom free. I lost 12 pounds. My facial wrinkles were disappearing and it was as though my aging was reversing. I had just turned 47 and felt 35. Today, I have lost an additional 37 pounds, several inches and two dress sizes. I am able to workout several times a week and do more today than

when I was in my 30's.

My son, Michael, who suffered from ADD, chronic allergies and sports induced asthma was symptom free in two weeks. During the basketball season he didn't experience one attack. My daughter, Tara, suffered from chronic allergies and ADD. I received a phone call from her teacher who

that she would have to be on morphine for the rest of her life. Not a good option for a single mom. When she got on the products her pain went away in two weeks time. My grandmother's leukemia went away—her doctors are completely amazed with her progress. My great-grandmother was able to get off all her medications. Today she is 94 years old and only takes these products. My father-in-law's allergies went away. My sister's allergies went away and I even have my dogs on the products and almost every family member now takes the products. Even family members who weren't sick started taking the products and feel more energy! In fact, none of us gets sick anymore, and we feel full of energy and life!

We are so thankful for these products and we wouldn't go a day without them!

was noticing significant changes in reading comprehension and writing. Within months both children were getting A's and B's on their report cards. My husband, Dean, is able to focus more, has more energy today and is also allergy free. The whole family has been using glyconutritionals for almost two years and we continue to see health improvements. Dean's parents have been taking the glyconutritionals for over a year. Dean's mom had an initial change in high blood pressure lowering and overall general energy change. Both of them joined a health spa and regularly workout—they are in their mid-late 70's.

My parents saw such a difference in Dean's parents that they now are on the products. My mom experienced energy increased, weight loss and overall well-being. She walks several times a week. My dad also has more energy and overall well-being. My sister suffered with heel spurs, tiredness, and headaches and is now symptom free.

The Hawkins family received benefits in the areas of: increased energy, mental alertness, hormonal balancing, fat loss, ear and respiratory infections, and liquid burns. Dr. Hawkins has seen patients benefit in cases of autism, chronic fatigue, acid reflux, seasonal allergies, diabetes, periodontal disease, Attention Deficit Disorder, emphysema, asthma, shingles, anorexia nervosa, Down's Syndrome, venereal warts, breast cancer, hyperthyroidism, ulcerative colitis, irritable bowel syndrome, chronic spasms, fibroids, symptoms of menopause, and so many other conditions.

My name is Budweiser Hawkins II, DC. I was introduced to glyconutrients when I took a look at a video presentation one evening after 14 hours of treating patients. The information on the video peaked my interest enough to want to see a live presentation so I could get all of the available products for my family and my practice. Upon receiving the products, I immediately started myself, my family, and five patients who either suffered from chronic ailments or had a terminal condition. I was truly amazed at the results I witnessed during my first year of using these products.

When I started the glyconutrients, I noticed incredible energy that was sustained throughout my day. I also noticed increased mental alertness under stress. My wife was suffering from a hormonal imbalance with the birth of our second child. Once she started on the glyconutrients, her energy increased. It helped trim inches off her body and it balanced her entire hormonal system. Our son was born with a suppressed immune system. He suffered with chronic ear infections and respiratory infections which put him behind schedule for vaccinations due to his illnesses. This lasted for six years until we started supplying the glyconutrients to his system. Since that time, he has not been on any medication and hasn't been ill. My daughter escaped blistering and scarring when she spilled hot tea on her thighs, because we immediately applied the glyconutrients in a gel form. It not only prevented the blistering, but she was able to resume her normal playful activities approximately 15 minutes after the incident. We have been taking these glyconutrients on a daily basis for the past seven years and no one in this family has suffered from the so-called common cold, flu or any respiratory ailment. Speaking as a health care professional, I find this truly amazing!

During the past seven years, I have seen patients regain their health from conditions like autism, chronic fatigue, acid reflux, seasonal allergies, diabetes, periodontal disease, Attention Deficit Disorder, emphysema, asthma, shingles, anorexia nervosa, Down's Syndrome, venereal warts, breast cancer, hyperthyroidism, ulcerative colitis, irritable bowel syndrome, chronic spasms, fibroids, symptoms of menopause, and so many other conditions.

These nutrients have given me the opportunity to change the lives of more people than I thought possible. The miracle is that the body has the ability to heal itself provided we supply the proper nutrition to accomplish that task. These glyconutrients are the foundation we must build on to make that happen.

Leaking Enzymes

The Ortmann family received benefits in the areas of: ankylosing spondylitis, back pain, gastritis, heartburn, pregnancies, deliveries, energy, chronic sinus infections, allergies, hypoglycemia, chronic fatigue/fibromyalgia and leaking enzymes.

My name is Rob Ortmann, MD. As a medical doctor, I initially began taking the glyconutritional products for prevention. As a person with Ankylosing

Spondylitis who has had to rely on aspirin type products for the past twenty years, I was also intrigued by the possibility that if I took the products, I may no longer need the anti-inflammatory medications. That clearly would be a plus, since I had numerous episodes of gastritis and required endoscopy to stretch my esophagus. I did not want to be forced to repeat that process ever again in my life!

About five months after starting the products, I forgot to take my usual morning medications. Normally, I would be reminded that I forgot when my back would begin throbbing about three to four hours later. I then would rush for the nearest aspirin so I could function the rest of the day. However, this morning, I was amazed to realize that well into the afternoon I no longer had any back stiffness. I decided to stop taking my anti-inflammatory meds and for the first time in many years, I was able to wake in the morning stiffness free. All the heartburn that I suffered due to side effects also dissipated. I continue aspirin free to this day, and I'm still on the products seven years later.

My wife, Renee, is a pharmacist and has been using the glyconutrient products since I got started. She has had great pregnancies, deliveries, and has fairly stable energy being a mom of four. That's a

small miracle in itself. All four children have had no ear infections, and we have had only one child on an oral antibiotic just one time that I can recall. We have only wellness visits (vs. sick visits) to the pediatrician's office.

We shared the glyconutrients with my mother-in-law, Joanna Knauf, a registered nurse. For 28 years, she was dependent on pharmaceuticals. She was challenged with chronic sinus infections, allergies, hypoglycemia and generally poor health. She did the only thing she knew to do at the time and that was to follow the traditional protocols. She developed Chronic Fatigue/Fibromyalgia and became unable to walk from the upper living quarters to the lower. She had been a nurse for 14 years and became very frightened when she saw herself becoming like so many she had cared for. Then she was denied life insurance coverage for an enzyme leaking from the cardiac and skeletal muscles. It was at this time that we shared the glyconutritional products with her. Within three months, she had life-insurance coverage. Her enzyme levels dropped from 700 (dangerously high) to below 200. Her CF/FM symptoms started to diminish. Her allergies and chronic infections were gone. Plus, there were no more hot flashes or depression. She became a more mentally alert, vibrant person truly able to enjoy life rather than "just settle" for what was. Her passion today is to work with her husband Donald to educate others about this nutritional breakthrough discovery.

As a medical doctor and clinical researcher, I have seen many people with many health challenges benefit from glyconutritional products. They appear to have a unique anti-inflammatory/anti-oxidant property that makes the cellular environment more conducive to normal cell function. For those wanting to try a novel approach to better health, the recommendation "Try it, it works!" is still the simplest and truest one!

The Larson Family received benefits in the areas of: type II diabetes, COPD, arthritis, bronchitis, hypertension, sleep apnea, asthma, allergies, chemical burns, mental clarity and neuropathy.

My name is Jared Larson. In February of 2004, I was in a state of surrender to my physical ailments. I was a type II diabetic, and had arthritis, bronchitis, hypertension, sleep apnea, asthma and an assortment of allergies.

I also had COPD—Chronic Obstructive Pulmonary Disease where only parts of the lungs are functioning. The rest of the tissue in the lungs are obstructed with scars or are sort of “crystallized” because of an interstitial lung disease which I was also diagnosed with.

I was on oxygen at night and carried a tank with me at all times in case I couldn’t breath. I used a nebulizer with albuteral two to eight times a day, used three different inhalers including one that contained a strong steroid to which my dentist credited the loss of four of my teeth. I was taking nine medications and using a nasal spray for my allergies. My doctors had told me that most of my conditions were chronic and degenerative. I weighed close to 350 pounds

My allergies have cleared up to the point that for the first time in twenty years, we have a pet cat living with us.

and was in the process of being prepared to take pre-surgical classes for a gastro bypass. Some of my fears were centered on my lungs not being able to restart after surgery. My mobility was limited to walking no more than 100 yards at a time without my legs collapsing due to lack of oxygen. I was a full time student and was being helped through Disabled Student Services and a federal program called ARCHES. They were also helping me with my dyslexia and ADHD. I was 57 years old at the time, medically retired and living on SSI. This was a far cry from the active life I had lived as a police officer and adventurer.

One Sunday afternoon I was resting in my electric recliner, where I spent most of my waking and sleeping time, (I couldn’t sleep in my bed due to arthritis pain). When some of our good friends from church, Carol and Earl Barnes visited and, in conversation, introduced me and my wife to this strange concept of glyconutrients. They introduced me to their

son and daughter-in-law Eric and Laura Barnes. Eric and Laura shared their story with us and we

moved towards that ray of hope called glyconutrients. We could only afford to have me take the products to start with and luckily I experienced the first of what would become a long string of miracles brought about by God through glyconutrients.

Two and a half weeks after starting the supplements, I got up in the middle of the night and felt the carpet under my feet, both texture and temperature, for the first time in three years. My neuropathy had started to subside in both legs and feet. A few days later my arthritis pain was missing. My blood pressure dropped from 185/95 to 130/60 then to 90/52. At that point I called my doctor and he reduced my blood pressure medication. My blood sugar readings started dropping from the 375-400 range to 80, then to 60. I called the doctor again, and he cut my diabetes medicine in half. I found myself walking for extended periods of time including covering a photo assignment at a baseball game for our school paper that lasted for four and a half hours without collapsing. I had a second degree chemical burn on my back that completely healed in five days. I no longer use oxygen and inhalers. My allergies have cleared up to the point that for the first time in twenty years, we have a pet cat living with us. And this is the topper, I am normally allotted double the time needed for testing. But I completed my last final exam, a two-hour test (four hours allotted for me), in 55 minutes, scoring an A. I’ve now lost over 50 pounds in four months. And lastly, I’ve reduced my medications from nine pills twice a day to two pills twice a day.

I now have hopes of being able to run and fly sailplanes again thanks to Carol and Earl Barnes opening their mouths and sharing.”

Post Traumatic
Stress Syndrome

The Gafford family received benefits in the areas of: ear infections, hip and joint pain, arthritis, COPD, shingles, depression, athletic performance, cystic fibrosis, and fever blisters.

My name is Greg Gafford. The blessings of this discovery to my family are incredible. Looking back at my prayer journal, I realize that many of those needs have been met through it. It all started with our youngest son. He has Cystic Fibrosis—the number one genetic killer of children. After one year on the glyconutrient products he has a new life. His need for breathing treat-

ments has dropped from six to twice a day. His medications, which cost around \$5,500 a month, have gone from twenty three down to one. He is now able to play basketball and golf more competitively. Fever blisters that used to constantly plague him are gone. Incredibly, he has grown three and a half inches and gained a remarkable twelve pounds. The quality of his life has improved tremendously to say the least! Our entire family has enjoyed our new and improved health, even where we didn't realize there was a problem.

For instance, my twenty-three year old daughter was struggling to balance college, work and spending time with her young family. Both of her children avoided having surgery to put tubes in their ears and are thriving. She is now able to stay at home, raise her children and work at her own pace.

The Barnes family received benefits in the areas of: juvenile diabetes, diabetic stroke, paralysis, PMS, ADD/ADHD.

My name is Laura Barnes. I began taking the glyconutrients in 1998. My friend, Terry, introduced them to me, along with the scientific validation. That was important to me. I have been a Juvenile Diabetic for twenty-three years. I had a Diabetic stroke in 1992. I battled with partial paralysis for seven years. It

My family has their wife and mother back, better than ever!

affected my speech and motor skills on my left side. I hoped that these new glyconutrients would give my body what it needed to repair itself. I began using heavy servings of the glyconutrient products.

It was clear to me that I needed to take the product long enough, and in sufficient amounts, for my body to be able to heal itself. It did not happen over night. The first month, my physician decreased my

insulin amounts. I was taking six shots a day of 35 units of insulin or more. My sugars stabilized with the glyconutrients. My PMS went away immediately. My husband is so happy now! Then I did not see any noticeable changes until seven months later. I woke up one morning and could feel my face and fingers right away. Usually, it would take several hours before I could get out of bed and begin my day. With diligent use of the products, I had my full function back within one year. Now, six years later, I am able to use an insulin pump, instead of all the shots each day. I only take ten units of insulin each day and there are no side effects from my stroke. My family has their wife and mother back, better than ever!

My son was diagnosed with ADD/ADHD at age six. He was put on Ritalin, but he began to get so thin and

My mother was contemplating having a hip replacement as a result of the severe pain that had developed, and my father's body was experiencing the aging process, knee replacement and all of the joint pain and arthritis that accompany it. Today they are active and enjoying their hobbies to the fullest. In addition, my father-in-law's COPD is now completely under control and his indigestion has greatly improved. My mother in-law's shingles and body pain are gone and she enjoys more restful sleep.

As for Donna and I, before we started taking the products, we thought we were healthy. After only a few weeks, joint pain, stress, insomnia and depression were all under control. We feel great! Our eldest, Jordon, is a young, strong athlete who is experiencing increased performance and hormonal support.

In conclusion, God has given us the opportunity to share with thousands of people who are praying for an answer in their lives.

The Mullaly family received benefits in the areas of: sinus problems, fatigue, bronchial asthma, allergies, energy, sleep, pregnancies, and academics.

My name is Laura Mullaly. Our family was first introduced to the glyconutritionals by a friend whose young son was fighting cancer—and won. At that time, my husband was dealing with sinus infections from October to March, and constant fatigue from long work hours. After three months on the glyconutritionals, he was able to toss out the pocket load of decongestants and pain relievers and regained high energy levels. Shortly after 9/11, he was activated in the United States Navy. He had the stamina for the long security watches and passed the PT (physical training) test in record time.

Our oldest daughter was also suddenly dealing with bronchial asthma brought on by allergies; her immune system was struggling to fight back. After trying naturopathic and herbal remedies, we were very confused about what worked and what did not. Once on the glyconutritionals, she had significant improvements, to the point of clearing up all symptoms within months.

I started to use the products and had an increase in energy levels and better sleep patterns. I used the glyconutritionals extensively through the last two pregnancies. Never had a pregnancy been so “comfortable” and a labor so “bearable” with a rapid recovery. Both babies were more than healthy; they were alert and content from the first days! And I was able to drop the pregnancy weight without much of a struggle.

Today the whole family is healthy and vibrant. The children do not suffer from weeklong viruses and vomiting bugs like their peers. Everyone sleeps well at night and is enthusiastic about life. We have also found that the glyconutritionals help the children (especially the active boys!) focus on their academic studies.

Today there are many sailors, moms, dads and children in our sphere of influence experiencing the same type results. Because of these results, this family is able to afford the monthly expense of all eight family members taking all the appropriate products and additional income to fund missionary families with products.

The glyconutritionals have brought this family a lifestyle never imagined; health, peace of mind and financial rewards. For this we will be thankful for the words of those who cared to share this phenomenal opportunity!

develop ticks. He was put on the glyconutrients a year later. The nutrients have improved his behavior and performance. He is a healthy growing boy, with many talents and gifts to share with his community. My husband and I have all of our children on the glyconutrients for optimal health and prevention of disease. We are confident our family is protected from any known or unknown illness that may be discovered. This knowledge provides us with a great sense of peace of mind and reassurance for our busy lives.

The Hooper family received benefits in the areas of: Multiple Sclerosis, blindness, extreme fatigue, Raynaud's Syndrome, chronic bronchitis, arthritis, Irritable Bowel Syndrome (IBS), migraine headaches, retinitis and hypoglycemia.

My name is Bob Hooper. My story began when Yvonne Cable came to my office with this silliness about glyconutritionals. I told her not to come back unless she had clinical trials or a person with Multiple Sclerosis who has benefited.

Back in 1987, I had the first symptom of Multiple Sclerosis (MS). My right eye essentially was blind in the center of the field of vision to the degree I couldn't see headlights coming toward me.

After that episode, things settled down a bit, my eye improved and I went back to work and tried to ignore that irritating area of my life. In the spring of 1996, I was combing my hair on the left side and realized my scalp was numb. It was getting worse and I was concerned because my cousin also had that condition and hadn't been able to roll over in bed for eight years. This is not what I wanted for my life.

By the end of 1997, I had extreme fatigue (asleep by 6:00pm), right eye irritation, left side numbness and, according to my wife, shortness of temper and grumpiness. Unfortunately, for those who have MS you know that soon these would be considered the "good old days."

About that time, Yvonne came back to my office for the third time with the phone number of a guy who said in his own words, "I used to have MS and be in a wheel chair." After that conversation, I started on the glyconutritional products. Within a few weeks, my eyes were improving. Within a month, my energy was recovering and after two years I can say, "I used to have MS." I got my life back.

As I got started on the glyconutritional products, I tried to share them with my fiancé, JoEllen. She couldn't believe that I was trying more "stuff." She was scathingly skeptical. I insisted that she take them! She protested that

she was healthy for her age and did not need this "stuff."

At the time, she had Raynaud's Syndrome in her hands and feet. She had chronic bronchitis that put her in the hospital once a year for the past 30 years. Plus, she had arthritis plaguing her ankles, knees, hips, and back from 20 years of ballet dancing. She had Irritable Bowel Syndrome (IBS), a side effect of the ovarian cancer she had and a total hysterectomy and colon resection. And one more thing—she had migraine headaches and retinitis that accompanied hypoglycemia. And she thought she was healthy!

I had to hand her the "stuff" EVERY day with a glass of water. JoEllen took it to quiet my noise. At first, she said she did not notice anything, but four months into the process, someone was in desperate need of the glyconutritionals so I gave them ours. What an eye opener! All of her symptoms she had had slowly diminished over those four months. It was so subtle that she didn't notice their disappearance. Then they came back like a sledge hammer. She felt terrible.

As soon as our reordered products arrived in the mail, she needed NO PROMPTING to take them! And now she makes certain neither of us ever runs out. And how healthy is she now? She has no Raynaud's, no IBS, not one incident of bronchitis in six years. Her blood sugar levels are normal, the retinitis is so improved, that she no longer needs glasses to drive. The arthritis in her knees and ankles is gone. Her hips and back bother her only when she spends too much time sitting in airplanes, as we now travel all over the world sharing this great gift of glyconutritionals. As for me, I get up every day when I'm done sleeping which is a big contrast from the maniacal way I lived for 26 years running (or being run by) a successful property and casualty insurance agency. Life is good.

The McLeod family received benefits in the areas of: malignant tumor mass, very aggressive leiomyosarcoma cancer, low energy, hormonal imbalances, chronic pain, and addiction to cigarettes.

My name is Rick McLeod. In 1997 I discovered that

I had a malignant tumor mass in my pelvic area, 15 by 22 cm. It was the size of a cantaloupe. This mass was attached to the Illiac vein in my right leg. I had a very complicated surgery that lasted 10 hours. After the surgery, my right leg swelled up to 54 inches around. I went back into surgery for them to run a graft to get some circulation back in my leg.

Then a biopsy was done on the tumor mass; they found a very aggressive cancer called leiomyosarcoma. Oncologists have had very little success against this type cancer with conventional methods of chemotherapy and radiation therapies. Still showing positive tumor markers after a month in the hospital, my doctors encouraged me to have chemotherapy and radiation. They wanted to place radiation

strips in my groin area. I said, “No.”

Major complications from the surgery erupted. I couldn’t walk. My leg suffered entropy in the muscles and we had concerns about blood clots forming. In addition, there were concerns about residual microscopic cancers cells ending up in my lungs. Two months later, another tumor mass grew in my groin area the size of a golf ball. The doctor wanted to do surgery again. He said when taking out this mass there was a 50% chance that they might have to amputate my right leg. To top that, he said there was a 20% chance of me living after six months. I refused the surgery and the treatments.

I was investigating alternatives when my oncologist said to me that if my “immune system” was working better, I could lick this. My sister-in-law, Ninna Detar, called to let me know of some nutrients that might help. Her exact words were, “I don’t know too much about it, but I have

someone who could come by and tell you more.” Her friend Linda told me about the glyconutritional products.

They were the very thing that my oncologist said I needed to get my “immune system” engaged in this fight for my life. As a result of my faith in the Almighty, my family, friends and the glyconutrient products, I vigorously started on these products. Seven years later I’m here to tell this story. In a year and four months my medical reports said that there was “no evidence” of a disease and no metastasis of it either. WOW!

In addition, my wife Nancy has the energy of a 21-year-old. She never misses a day of work because of sickness. Her mother, at age 66, has overcome ailments which include: low energy, hormonal imbalances, chronic pain and addiction to cigarettes. These glyconutritional products are a staple in our everyday lives. We don’t go a day without them.

The Lemmers family received benefits in the areas of: asthma, ear infections, sinus problems, energy and fantastic pregnancy.

My name is Amy Lemmers. In 1998, someone introduced us to the glyconutritional products. They knew we were big into nutrition and wellness due to the loss of my father at age 54 and my dear girlfriend at age 31 to cancer. I always wondered, if vitamins and minerals were enough, how come every health challenge known was on the rise? In my heart, I knew there was something missing.

With glyconutrients, I knew I had found what I was looking for! Our daughter, Sidnee, was diagnosed with asthma. The doctors had her on three to four different medications and the side effects were horrible. She was either sluggish and tired or hyperactive and scattered, and medical costs were around \$150-\$200 a month.

We started Sidnee on glyconutrients because we hadn’t found anything else at the time to help her. We had tried other vitamins and mineral lines, but they just didn’t make a significant difference. We could tell a big difference in Sidnee within weeks of being on the glyconutrients. We were able to cut her medications in half by the second month, and within six months we didn’t refill any of her medicines.

It has now been almost six years and we haven’t had to rush Sidnee to the hospital or run looking for inhalers. She is healthy and has no asthmatic symptoms. And all our other four children just don’t get sick!! I had a wonderful pregnancy with my last son, Chase. He has been to the

doctor only two times for his one and two year old check-ups. He has had no ear infections or colds.

We thank God everyday that someone took the time to share with us this unbelievable gift called glyconutritionals. We all have great health and have been blessed financially because we’ve shared this gift with thousands of people! No words will ever be able to express our gratitude.

This is your invitation to join our family in wellness!

You can have wellness for the rest of your life.

Glyconutrients are indeed the language of life. It's a common sense, non-toxic approach for good health. With the proper amounts of glyconutrient consumption, your cells will communicate more effectively. If your body has healthy cells and good communication, you'll have healthier tissues, glands and organs. Your immune system will be strong and in balance. Make sense?

“There are two obstacles to vibrant health and longevity: ignorance and complacency.”

World Health Organization

You get to choose which healthcare path you and your family will take. If you choose the traditional approach, you'll be complacent, do nothing and wait for a symptom to be expressed, then treat it with a drug which is often expensive, toxic and risky.

Or if you take the safe and proactive path of wellness and prevention through nutrition, you will enhance your immune system and bring your body into balance to protect your family from disease.

The choice is yours. Choose wisely. To learn more contact:

Disclaimer: Glyconutrients are not meant to treat, cure or mitigate any disease, but science has shown that given the right nutrition the body has the ability to repair and heal itself of just about any condition. You should always consult your healthcare professionals before consuming supplements with pharmaceutical drugs. Glyconutritional products are nutritional in nature and do not substitute for a doctor's care or for proven therapy.
